## Introduction

GDataSet is a C library to manipulate generic data sets.

It offers the following functionalities:

- loading a data set from its description file
- splitting the data set into user defined categories (e.g. training, validation, test)
- shuffling the data set

- looping through the samples of the data set.
- centering on the mean, normalizing, getting the covariance of two variables, getting the covariance matrix for dataset of type VecFloat

It provides an unique interface to several implementation supporting various types of dataset. Supported types are: VecFloat and pair of GenBrush (img/mask).

The GDataSet library uses the PBErr, GSet, PBJson, PBMath and PBFileSys libraries.

## 1 Interface

```
// ===== GDATASET_H =====

#ifndef GDATASET_H
#define GDATASET_H

// ===== Include =====

#include <stdlib.h>
#include <stdio.h>
#include <stdbool.h>
#include <execinfo.h>
#include <errno.h>
#include <string.h>
#include "pberr.h"
#include "gset.h"
#include "pbmath.h"
#include "pbjson.h"
#include "pbfilesys.h"

// Define locally the needed types and functions for libraries that were
// not included to allow the user to include only what's needed for her
// application
#ifndef GENBRUSH_H
typedef struct GenBrush GenBrush;
typedef enum GBScaleMethod {GBScaleMethod_Default} GBScaleMethod;
GenBrush* GBCreateFromFile(const char* const fileName);
GenBrush* GBScale(const GenBrush* const that,
    const VecShort2D* const dim, const GBScaleMethod scaleMethod);
void GBFree(GenBrush** that);
VecShort2D* GBDim(const GenBrush* const that);
#endif

// ===== Define =====

typedef enum GDataSetType {
    GDataSetType_VecFloat, GDataSetType_GenBrushPair
} GDataSetType;

// ===== Data structures =====
```

```

typedef struct GDataSet {
    // Name of the data set
    char* _name;
    // Description of the data set
    char* _desc;
    // Type of set
    GDataSetType _type;
    // Nb of samples
    int _nbSample;
    // Set of samples
    GSet _samples;
    // Dimensions of each sample, they must have all the same dimension
    // e.g.:
    // if samples are VecFloat<3> then _dim = VecShort<1>[3]
    // if samples are GenBrush then _dim = VecShort<2>[width, height]
    VecShort* _sampleDim;
    // Splitting of samples
    VecShort* _split;
    // Sets of splitted samples
    GSet* _categories;
    // Iterators on the sets of splitted samples
    GSetIterForward* _iterators;
} GDataSet;

typedef struct GDataSetVecFloat {
    // Generic GDataSet
    GDataSet _dataSet;
} GDataSetVecFloat;

typedef struct GDataSetGenBrushPair {
    // Generic GDataSet
    GDataSet _dataSet;
    // Format of images
    char* _format;
    // Dimensions of images
    VecShort2D _dim;
    // Nb of mask per img
    int _nbMask;
    // Path to the config file of the data set
    char* _cfgFilePath;
} GDataSetGenBrushPair;

#define GDS_NBMAXMASK 100
typedef struct GDSFilePathPair {
    char* _path[1 + GDS_NBMAXMASK];
} GDSFilePathPair;

typedef struct GDSGenBrushPair {
    GenBrush* _img;
    GenBrush* _mask[GDS_NBMAXMASK];
} GDSGenBrushPair;

typedef struct GDSVecFloatCSVImporter {
    // Size (nb of lines) of the header
    unsigned int _sizeHeader;
    // Separator
    char _sep;
    // Number of column
    unsigned int _nbCol;
    // Fied converter function
    float (*_converter)(int col, char* val);
} GDSVecFloatCSVImporter;

```

```

// ===== Functions declaration =====

// Create a new GDataSet of type 'type'
GDataSet GDataSetCreateStatic(GDataSetType type);
